Sieve Shaker for 200/300 mm Sieves, with Frequency Adjustment

DESCRIPTION

Sieve Shaker with Frequency Adjustment is fitted with a very efficient clamping device that ensures sieves are held firmly without over-tightening and allows them to be quickly removed and replaced. The shaker has frequency adjustment and fitted with a digital timer which can be preset to any duration up to 60 minutes.

Sieve shaker has been specially designed to operate with heavy samples without loss of performance. The unique vibratory action also helps keep the apertures clear and free from binding. Sieve Shaker imparts a circular motion to the material being sieved so that it makes a slow progression over the surface of the sieve.
